

Listing of the claims:

Claims 1-22: (Canceled)

Claim 23 (New)

An articulator tray having at least one opening with repeating wider and narrower regions, said opening having tapered sides so that said opening is wider at the point where it opens to the superior surface of said tray, said tray also having projections extending upward from said superior surface of said tray.

Claim 24 (New)

The articulator tray of claim 23 having both a ball and a socket extending from said tray which act as reciprocating hinge means parts for interaction with hinge parts of a second articulator tray.

Claim 25 (New)

The articulator tray of claim 23 having a closure means covering the bottom of the opening of said tray.

Claim 26 (New)

An articulator tray having at least one opening with repeating wider and narrower regions, said opening having tapered sides so that said opening is wider at the point where it opens to the superior surface of said tray, said tray having both a ball and a socket extending from said tray which act as reciprocating hinge means parts for interaction with hinge parts of a second articulator tray.

Claim 27 (New)

The articulator tray of claim 26 having projections on the superior surface of said tray.

Claim 28 (New)

The articulator tray of claim 26 having a closure means covering the bottom of said wider opening of said tray.
